Honolulu Board of Water Supply Selects XMF Accelerator™

Longmont, CO, December 9, 2008 --- geoXMF LLC announced today that Honolulu Board of Water Supply (HBWS) has selected geoXMF's XMF Accelerator for their enterprise GIS system. XMF Accelerator provides a Google-like search engine targeted at GIS data tables and map layers. HBWS has added XMF Accelerator to speed access to GIS data, support management decision-making and broaden the use of GIS throughout the IT enterprise.

The Board of Water Supply (BWS) manages O'ahu's municipal water resources and distribution system, providing residents with a reliable system and safe drinking water supply. As the stewards of O'ahu's most precious resource, the Board's nearly 600 employees embrace this tremendous responsibility. XMF Accelerator will enhance access to map services delivered by the Board's award winning enterprise GIS system which enables employees to access critical water system data and information.

HBWS engineers and field workers communicate throughout the workday to answer infrastructure location, condition, maintenance and engineering questions. Rapid access to mapping and map-based links to other information improves communication and decision-making. XMF Accelerator also provides a central access point to data scattered throughout the organization – across servers, offices and business units. Initial testing of XMF Accelerator has resulted in impressive time savings when accessing enterprise GIS data.

“As a manager, I need information to make decisions” said Ellen Hirayama, GIS Manager. “They are not earth-shattering decisions, but day-to-day decisions that help our organization, infrastructure and services run more smoothly. So I need to access a lot of different data ASAP. XMF Accelerator really helps me do that.” An enterprise-wide rollout of XMF Accelerator is planned in the upcoming months.

HBWS also uses geoXMF's XMF Alerter software to improve enterprise GIS performance and management.

About geoXMF

geoXMF LLC is a leader in real-time GIS monitoring and services. geoXMF's industry leading technology integrates with ESRI® Internet mapping software and is used by organizations including transportation, power distribution and local/regional governments. geoXMF provides products that enable GIS professionals to effectively manage their spatial enterprise and proactively monitor the key components of their GIS technology stack.

The company's XMF Alerter software responds to the growing need for organizations world-wide to maximize GIS reliability and performance. For more information, please visit our website: www.geoxmf.com
